2. Citations and explanations (Rule 70.7)			
1. This report refers to the following document:			
D1: DE 42 04 228 A (WUERSTL CURT VERMOEGENSVERWALT), 19 August 1993 (1993-08-19)			
2. <u>Independent claim 1</u>			
Document D1, which is considered to be the closest prior art, discloses the following:			
<p>A child seat with a seat shell (3, 5) (column 3, line 40) that can be adjusted back and forth between various positions on a base element (1), the front edge (see figure 1) of the seat shell (3, 5) being provided with an actuating handle (8) (column 3, lines 60 to 64) which is connected to a locking device (8, 13), by means of which the seat shell (3, 5) is held in one of the various positions in relation to the base element (1) when the actuating handle (8) is in its normal unactuated condition, and can be adjusted by actuating the actuating handle (8); the actuating handle (8) is pivotable about a pivot</p>

axis (7) from the normal locked position into an unlocked position and from there back into the locked position by means of a return spring device (see claim 5), and in the unlocked position forms an adjustment handle for adjusting the seat shell (3, 5) in relation to the base element (1), the base element (1) being provided with a slider arrangement (2a, 2b) that has at least one slider track (2a, 2b).

The subject matter of independent claim 1 differs in that:

the actuating handle (26) is a pivot handle (28) which can pivot from the normal locked position into an unlocked position about a pivot axis (7) which is at least approximately parallel to the front edge of the seat shell (14),

and in that the slider track (24) has detent slots (38, 40, 42) for the various positions of the seat shell (14) in relation to the base element (12), and the locking device (36) has a connecting device (34) connected to the pivot handle (28) with at least one guide element (44) that is guided along the at least one slider track (24) and with at least one detent element (46) designed to engage the detent slots (38, 40, 42).

The subject matter of claim 1 is therefore novel (PCT Article 33(2)).

2.1 The problem addressed by the present invention can thus be seen as that of making the seat adjustment system easier to operate.

2.2 The solution proposed in claim 1 of the application involves an inventive step (PCT Article 33(3)) for the following reasons:

The actuating handle is a pivot handle, which is easier to use because it moves together with the seat shell and is therefore always accessible, and because the connecting device reduces the amount of manual force needed to actuate the device. The claimed solution is not obvious from the prior art.

3. Dependent claims 2 to 7

Claims 2 to 7 are dependent on claim 1 and therefore also meet the PCT requirements in respect of novelty and inventive step.
